
a Localize the SCC
b Accumulate evidence during search
c Read out at T
A
B
C
D
E
$G_S = (S, E_S)$
Directed edge
Observed pair
Pairs need not be edges.
Adaptive window
UCB + scheduled probes
$W_t \subseteq S, \quad |W_t| \le w$
Evaluate / reuse
Local LLM
$y_t(v)$
$\mathcal{U}_t, \ h_t$
Node evidence
Risk-score histories
$\bar{q}_t(v) = \text{mean } \mathcal{Y}_t(v)$
Normalized support $e_t(v)$
Program-computed OC
Two-of-three tests → O_t
Pair memory
$p = \{u, v\}, \quad m_t(p)$
Critical-pair ledger
M_T
Memory feedback; $t = 1, \ldots, T$
Core priority
$s_T(v) = e_T(v) + \alpha b_T(v)$
$+ \gamma \mathbf{1}[v \in O_T]$
$b_T(v) = \max_{p \in \mathcal{R}_T(v)} r_T(p)$
Seed pairs → scan → close pairs
$H_T \subseteq S, \quad |H_T| \le B(S)$
Separate risk ranking
$\text{rank}(\bar{q}_T(v))$
